

# MIRIMICHI GREEN PEST CONTROL FACT & TIP SHEET

## FACTS & TIPS FOR APPLYING MIRIMICHI GREEN PEST CONTROL:

Follow all instructions on label

- Mirimichi Green Pest Control products are safe to spray around people, pets, and plants.
- Mirimichi Green Pest Control is a kill on contact pesticide, pheromone interrupter, and will disrupt future egg cycles, eventually eradicating the treated area of pests.
- Mirimichi Green Pest Control controls Mosquitoes, Ticks, Fleas, Ants, Roaches, No-see-ums, Chiggers, Spiders, Mites, White Fly, Aphids, Moths, and many more insects.
- Mirimichi Green Pest Control is made from all-natural ingredients that are exempt from registration by the rules of the EPA 40 CFR Part 152 - FIFRA25b list.
- All products have an immediate re-entry time after the spray has settled.
- PPE requirements are: glasses and mask to protect applicator from breathing in or getting in eyes the organic soaps of the emulsified products.
- It is safe to treat around water features and ponds. Do not treat the water directly. Product drift will not harm aquatic life. Although, Mirimichi Green Pest Control is safe to encounter for people and pets in puddles and ponding situations.
- Rainfall does not affect the products' effectiveness.
- Mirimichi Green Pest Control can be applied to all outdoor areas and some indoor areas to achieve complete pest control.
- Application rate: 4-8 oz. of formula per gallon of water or 1 part formula to 15 parts water.
- Infestation rate: Use up to 16 oz. per gallon of water.
- Injector tank: Shake well before mixing. 8 oz per 1 gallon of tank water. Larger systems with long mainline runs require 12 oz per gallon.
- When treating infestations, increase the dosage amount by 4 oz. per gallon of water to help control the outbreak.
- 1 gallon of finished product covers approximately 1500-7500 SF depending on the density of the landscape being treated and the type of equipment being used.
- Program application schedule to achieve pest free area: Apply every 14-28 days.
- All lawn areas and all plant material should be treated.
- Spray the entire property. This includes: spray all points of entry, window areas, foundations, turf, bushes, trees, garage /carport, porches, gutters, drains, bird baths, outdoor furniture, fences, woodpiles, compost bins, buckets etc.
- All outdoor furniture can be treated. Please allow 15-30 minutes for the product to dry before using the furniture.
- Concentrate on areas that collect water and muddy spots. Even after mud dries out the eggs can sit dormant for months, this is your opportunity to prevent a hatch.
- Spray regularly! Stick to a program, be proactive (not reactive) to prevent outbreaks. Customers that commit to a maintenance program achieve the best results and uses less product overtime.

## MIRIMICHI GREEN PEST CONTROL PROGRAM EXAMPLE:

- A 12-month program is the most successful way to achieve complete pest control.
- First month of program use 6 oz. of Mirimichi Green Pest Control to one gallon of water.
- Treat entire property. If there is a heavy pest presence 8 oz. of product can be used to achieve a faster control.
- Months 1-4 - use 6 oz. per gallon.
- Months 5-8 - use 8 oz. per gallon.
- Months 9-12 - use 4 oz. per gallon.
- Recommended use of a back-pack mist blower for all outdoor applications. Depending on density of landscape material you should be able to get 3500-7500 square feet of coverage per gallon.
- With a pump up back-pack sprayer you will get 1500-3000 SF per gallon.
- Flies can be controlled with 8-12 oz. with target specific applications.
- Mirimichi Green Pest Control is safe to be applied around bees and it will not contaminate a bee hive. If you spray a bee or butterfly directly, it will harm them but it will not harm them if they land on anything that has been treated with the product.
